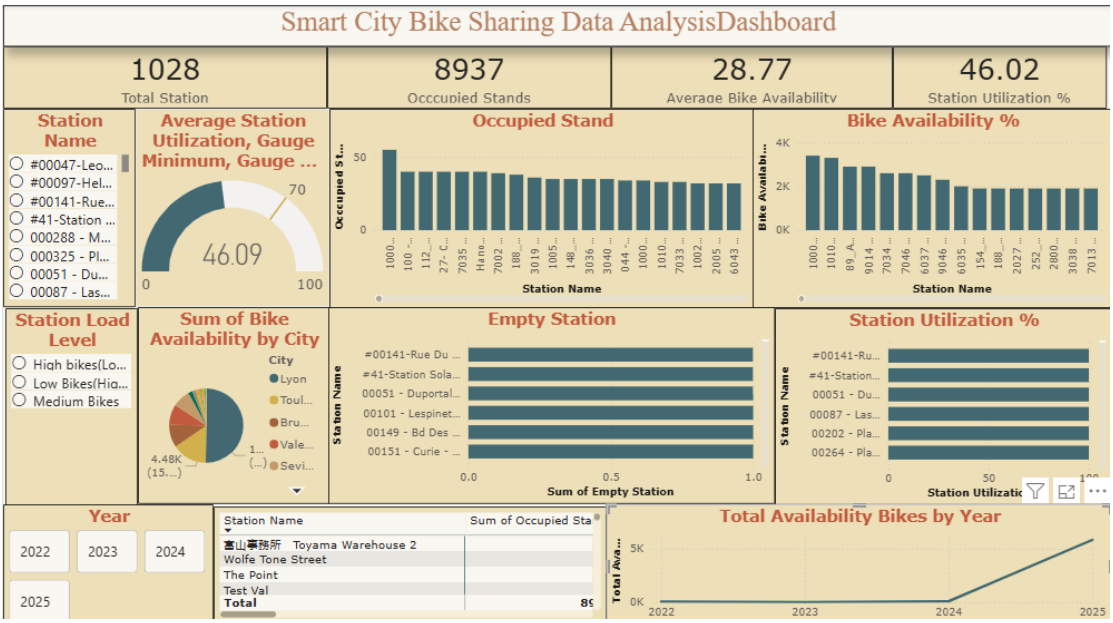
Dashboard Creation



findings

- The bike sharing network operates across **1,028 stations**, indicating a large operational system.
- **8,937 occupied stands** show active usage of the bike sharing infrastructure.
- **Average station utilization is around 46%**, indicating moderate usage of station capacity.
- Bike availability varies significantly across stations, showing **uneven bike distribution**.
- Some stations frequently become **empty**, indicating **high demand locations**.
- **Lyon contributes** the highest share of bike availability among all cities.
- Several stations show **high utilization**, reflecting strong customer demand.
- Some stations remain **underutilized**, suggesting potential operational inefficiencies.
- Bike availability shows **an increasing trend in recent years**, indicating network growth.
- The system could benefit from **better bike redistribution to balance supply and demand**.

Business insights

- Redistribute bikes regularly between stations to avoid **empty or overfilled stations**.
- Increase **station capacity in high-demand areas** where utilization is consistently high.
- Review and optimize **underutilized stations** by relocating them to areas with higher demand.
- Plan **additional bike supply during peak months** based on seasonal demand trends.
- Expand the bike-sharing network to **new urban areas with potential demand**.
